

Water Powered Desktop Calculator

1. To activate the calculator, remove the H2O Water powered battery from the rear of the calculator.
2. Unscrew the clear cap by turning anti-clockwise and fill with a few drops of water to about 3/4 full. Screw the battery body back on to the cap. Do not over tighten.
3. Replace the battery, ensuring that the polarity lug is on top. The battery should only fit in one way. Please make sure that the ribbon is placed under the battery to ensure easy removal next time.
4. Press the ON/AC key, the LCD shows 0, and your calculator is working.

When the display begins to fade, please add water again. One fill of the tube will power the battery for at least 1 month. This product is guaranteed for one year and the battery has an expected useful life of at least two years.

Replacement batteries are readily available from Tango Group Limited.

Risk of choking. Please be careful not to allow children to play with this product, some of the parts are removable and could cause a risk of choking.
